

Application Method of Diluted Benzoyl Peroxide

At present, many countries take diluted benzoyl peroxide as afterripening treatment agent and bleacher of wheat flour, because the diluted benzoyl peroxide is white powder; the applied Method is simple; the afterripening and bleaching effect are good and it is safe food additive.

When using diluted benzoyl peroxide, flour processing enterprises only need to select one set of micro-powder feeder according to the processing amount of flour. Add the diluted benzoyl peroxide in flour during processing flour, it can automatically mix evenly. The applied method is simple.
